commaily induced by an antigen in the form of a peptide fragment bound to a HLA molecule, rather than the intext foreign antigen itself, and are particularly important in tumour rejection and in fighting viral infections. The peptides are therefore useful therapeutically to treat or prevent viral infections and cancers in mammals (especially humans) or prevent viral infections and cancers in mammals (especially humans) e.g. prostate cancer, hepatitis B and C, AIDS, and renal carcinoma. They can be administered as vaccines to elicit an immune response in individuals susceptible or otherwise at risk of viral infection or cancer, or used to treat chronic or acute conditions. They are also useful diagnostically, and can be used to induce a cytotoxic T cell response, by contacting a cytotoxic T cell with the peptide e.g. to produce CTLs ex vivo for infusion back into a patient. The polynucleotides encoding the immunogenic peptides are also useful the rapeutically and for immunisation as above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes peptides that selectively home to a tissue or organ. The peptides can be used for identifying an organ or tissue, for identifying a target molecule expressed by an organ or tissue or for treating an organ or tissue pathology, where the organ or tissue is selected from prostate, lung, skin, retina, pancreas, gut, ovary, adrenal gland, liver, and lymph node. The peptide bind to the membrane dipeptidase (MDP). AAY48618 to AAX49066 represent sequences
Cytotoxic T lymphocytes (CTLs) which destroy antigen-bearing cells are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New peptides which selectively home to organs or tissues, used for, e.g. identifying target ligands and for therapy of pathological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Homing peptide; organ; tissue; lung; pancreas; skin; retina; MDP; prostate; ovary; lymph node; adrenal gland; liver; gut; tumour; membrane dipeptidase.

The immunogenic peptides can bind to a specific HLA allele (i.e. HLA-A subtypes HLA-A2.1, A1, A3, 2 or A24.1 or HLA-B or C) and induce a cytotoxic T cell response against the antigen from which the peptide is derived.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAY45390 to AAY48214 represent specifically claimed immunogenic peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Immunogenic peptide having a human leukocyte antigen binding motif #560
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human leukocyte antigen; binding; immunogenic; glycoprotein; MHC; HLA; immune response; T cell activation; major histocompatibility complex; cytotoxic T lymphocyte; CTL; tumour rejection; viral infection; cancer; prostate cancer; hepatitis B; hepatitis C; AIDS; renal carcinoma; vaccine; immunisation.
                                                            The sequence is a specific example of a group of new immunogenic peptides having an HLA-A3.2 HLA-A1, HLA-A11 or HLA-A24.1 binding motif. For example, the peptides having an HLA-A3.2 binding motif each have 9-10 residues and contain, from the N-terminus to the C-terminus, (a) a first conserved residue selected from L, M, I, V, S, A, T, F, C, G, D and E and (b) a second conserved residue of K, R, Y, H or F, where the first and second conserved residues are separated by 6-7 residues. The peptides are capable of binding selected MHC molecules and inducing an immune response. They can be used to treat and/or prevent viral infection and cancer, e.g. prostate cancer, lymphoma, hepatitis or AIDS. They can also be used to produce antibodies for use as diagnostic or therapeutic agents. The peptides can also be used as diagnostic spents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New immunogenic peptides with HLA binding motif, useful in treatment and diagnosis of cancers and viral diseases \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ;

The peptides, which are synthesised to contain 0, 1 or 2 consensus motifs, are used to osmosensities yeast cells based on the antiproliferative activity of the Vpr protein, esp. the C-terminal motif. Peptides derived from the Vpr/Vpx C-terminal motifs can be used in the treatment of diseases mediated by cell proliferation such as cancer,

This invention describes a novel immunoadsorber (A) for treating sepsis which comprises a carrier of organic or synthetic polymer having bound to it poly- or monoclonal antibodies (Abl) against the complement factors (3a and/or C5a and against lippolysaccharide (LPS). Optionally other antibodies (Ab2) directed against other mediators of sepsis are also attached to the carrier. The products of the invention have anti-inflammatory and antisepsis activity. (A) are used for treatment, particularly by plasmapheresis, of sepsis and septic shock. The combination of antibodies used can be tailored to the requirements of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      integrin binding peptides which bind to various integrins. Peptides which bind to various integrins. Peptides which bind to alphay/betas and alphay betas hard bind to alphay/betas and alphay betas integrins contain the motif given in AAR76187. Alphay/betas integrins are also bound by RGD containing peptides. These peptides assume a conformationally stabilised configuration which is due to the formation of a disulphide bond, a peptide bond or a lactam bond. These peptides may be used for isolating the complementary integrin from a sample mixture by contacting them under ionic conditions to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequences given in AAR76185-200 and AAR79073-94 are high affinity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 allow binding of the integrin to the peptide and then separating the integrin from the peptide. They can be used for attaching cells to a substrate, by binding them to the substrate with the cell. The peptides promote wound healing when applied locally and inhibit the metachment of osteoclasts to bone. They inhibit angiogenesis, metastasis of tumours and migration of smooth muscle cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                   High affinity integrin binding peptides - can be used to attach cells to a substrate, inhibit the attachment of osteoclasts to bone, promote wound healing, inhibit angiogenesis, metastasis of tumours and migration of smooth muscle cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ;

The invention relates to novel fusion proteins comprising a heterologous polypeptide fused to a variant (non-wild type) bacteriophage

CC major coat protein (protein VIII). The invention also relates to replicable expression vectors which contain a gene encoding the fusion protein; host cells containing the expression vectors; phages which contains the fusion protein on their surface; phage libraries displaying a plurality of different fusion proteins on viral surfaces; and methods of using these compositions. The fusion proteins for the major coat proteins can be used to alter the number of fusion proteins the invention are well to tolerated in phage display systems. Variants of the major coat proteins can be used to alter the number of fusion proteins incorporated into a virus particle. Hyper-functional variants can be used to increase the number of fusion proteins incorporated into a virus particle. Onversely, hypo-functional variants can be used to decrease the number of fusion proteins into virus particles to achieve a desired level of fusion proteins into virus particles to achieve a desired level of the transformation of cells by highly purifying DNA. The present concentration of cells by highly purifying DNA. The present invention uses affinity DNA purification to reduce ionic impurities and thus radvantageous in electroporation methods for increasing the concentration of DNA present. The increase in DNA entering the prior concentration of small library size using recombinant DNA. Sequences at throblem of small library size using recombinant DNA prior or at problem of small library size using recombinant DNA. The present or at problem of small library size using recombinant DNA prior or at problem of small library size using recombinant DNA present.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Fusion proteins comprising a heterologous protein and a viral variant major coat protein useful in phage display systems for improving transformation efficiency .

extracellular supernatant of rat peritoneal exudate cells. For tryptic fragment T17 (a) see AAR07929. The protein was isolated and sequenced to produce oligonucleotide probes in order to identify human lipocortin and N-lipocortin. See also AAQ05805-25, AAQ06581, AAR07926-37 and AAR07956-66.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                the culture filtrate of Aspergillus tuning. Probes (see AAX00982-87) based on residues 4-10 of the peptide were used to screen a DNA library prepared from Aspergillus higer DS16813 (now renamed Aspergillus tubigensis CBS 331-90) to isolate a xlnA gene (see AAX00973) encoding a new endoxylanase A (see AAW95553). The endoxylanase shows optimum activity at pH 3.5-5.5, making it useful for industrial processes requiring lower pH, such as lagering of beer, and can also be used in baking, preparation of animal feedstuff, lignin removal from Kraft mill pulp, and in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This is an N-terminal peptide of a 25 kDa xylanase isolated from

    useful in the preparation of bread,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes peptides that selectively home to a tissue or organ. The peptides can be used for identifying an organ or tissue, for identifying a target molecule expressed by an organ or tissue or for treating an organ or tissue pathology, where the organ or tissue is selected from prostate, lung, skin, retina, pancreas, gut, ovary, adrenal gland, liver, and lymph node. The peptide bind to the membrane dipeptidase (MDP). AAY48618 to AAY49066 represent sequences which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                              to organs or tissues, used for, for therapy of pathological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human N-lipocortin; placenta; inflammation reduction; arthritis; rat phospholipase A2 inhibitor; tryptic fragment T17 (b).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               .;

                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a set of complementary peptide ligands generated from the human genome. The complementary peptides interact with their relevant target proteins encoded in the human genome. They can be used as reagents in drug discovery and as lead ligands to facilitate drug design and development. The present sequence is a complementary peptide provided in the specification.
                                                                                                                                                                                                                        Human; complementary peptide; ligand; drug discovery; drug design.

A set of peptide ligands consisting of specific complementary peptides to proteins encoded by genes of the human genome, useful in an assay for screening and identifying of one or more novel peptides which are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a set of complementary peptide ligands generated from the human genome. The complementary peptides interact with their relevant target proteins encoded in the human genome. They can be used as reagents in drug discovery and as lead ligands to facilitate drug design and development. The present sequence is a complementary peptide provided in the specification.
                                                                       Human; complementary peptide; ligand; drug discovery; drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;

                                                                                                                                                              A synthetic peptide (AAW13795) corresponds to an N-terminally deleted version of the hepatitis C virus (HCV) polyprotein NS4A,4B junction (see also AAW13771). Unlike other related peptides (AAW13771-86) and depsipeptides (AAW13787-91), this peptide is not suitable as a substrate for assays of HCV NS3 protease activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Monoclonal antibodies (MAbs) that bind to the ATI receptor (a subtype of Angiotenisin II receptor) are claimed. The Abs specifically bind to amino acid residues 8 to 17 of the rat vascular smooth muscle ATI receptor. This sequence is conserved in all memmellan ATI receptors so far cloned. The Mabs can be used for detection of ATI receptors, e.g. in cancer diagnosis. They can also be used to study and measure sperm motility and can be used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 195, A Sequence 28, A Sequence 7, Ap Sequence 8, Ap Sequence 8, Ap Sequence 17, A Sequence 1, Ap

PT0628
T-cell receptor beta chain V-D-J region (111-1AG) - mouse (fragment)
C;Species: Mus musculus (house mouse)
C;Date: 17-Jul-1992 #sequence_revision 17-Jul-1992 #text_change 30-May-1997
C;Accession: PT0628
R;Feeney, A.J.
J. Exp. Med. 174, 115-124, 1991
A;Title: Junctional sequences of fetal T cell receptor beta chains have few N rep. Reference number: PT0629; MUID:91277601
A;Reference number: PT0629
A;Status: translation not shown
A;Molecule type: mRNA
A;Residues: 1-7 cFEE.
A;Experimental source: newborn thymus, strain BALB/C
C;Keywords: T-cell receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 10

A;Title: Pentapeptide (proctolin) associated with an identified neuron.
A;Reference number: A94260; WUID:81225865
A;Contents: annotation; biological source
C;Comment: This peptide is found in the lateral white neurons, which occur (in the cockr innervate the striated hindgut muscles in insects and stimulate contraction of these musc; Superfamily: proctolin
C;Superfamily: neuropeptide
                                          A; Note: the synthetic peptide had the same chromatographic, electrophoretic, and pharmad
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               R;Groome, J.R.; Tillinghast, E.K.; Townley, M.A.; Vetrovs, A.; Watson III, W.H.; Hunt, Deptides 11, 205-211, 1990

"Identification and immunocytochemical localization of proctolin in pericardial organs of the shore crab, Carcinus maenas.";
Peptides 7:67-72(1986).
-!- FUNCTION: STIMULATES CARDIAC OUTPUT AND HINDGUT MOTILITY, MODULATES VISCERAL AND SKELETAL MUSCLE IN MANY ARTHROPODS.
-!- TISSUE SPECIFICITY: FOUND IN THE LATERAL WHITE NEURONS AND IN THE CRAB PERICARDIAL ORGANS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 THIS UNKNOWN

                                                                                     having an apparent molecular weight of 85,000 daltons, with a prof 4.9 to 5.1. The peptide is antiganic and specifically reacts with a monoclonal antibody obtained by immunising an animal with a monoclonal antibody obtained by immunising an animal with inver epithelial cells, followed by fusing and cloning. The liver cell regulatory factor is localised to the membrane, particularly at the sinusoidal pole, of normal adult hepatocytes.

The proteins of the invention, as well as being expressed by hepatocytes, are expressed by epithelial cells of the biliary ducts, endothelial cells, Ito cells and macrophages, by Sertoli cells, by spermatocytes at a specific developmental stage (end of the leptotene and zygotene), by ovocytes and follicular cells (also at a specific developmental stage), by haematopoietic cells and blood cells. The factors can be used for cell culture and to restore or maintain cell function in culture. See also AAR34137-R34139.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Bacillus thuringiensis; delta-endotoxin; insecticide; crystal protein; lepidopteran insect; CrylC; genetic engineering; mutagenesis; mutant; caterpillar; beetle; mosquito; toxic; modification.

polypeptide for modified Bacillus funringiensis crystal proteins (Crylc). The polypeptide of the composition is insecticidally-active against Lepidopterans. The composition is toxic to an insect cell and comprised within an insecticidal formulation can be used as a plant protective spray which is toxic to caterpillars, beetles and mosquitoes. The polypeptide of the composition may be used to kill an insect through ingestion of the composition directly or by ingestion of a plant coated with the composition a transgenic plant that expresses the polypeptide composition. The insecticidal proteins produced by B. thuringiensis are harmless to plants and other non-targeted organisms but toxic to their specific target insect. The polypeptides have improved toxicity so a reduced amount of bioinsecticide per unit area of treated crop can be used allowing economic and efficient utilization in the field. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
The present invention describes a new composition comprising an isolated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (pACOS7)) encoding 1-aminocyclopropane-1-carboxylic acid synthase (ACS) and an ethylene forming enzyme (EFE), respectively. The clones are deposited under the Accession Numbers NCIMB 40813 and NCIMB 40814, respectively. pASC6 and pACOS7 may be used to genetically control ethylene biosynthesis in plants and hence regulate the ethylene-induced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1-aminocyclopropane-1-carboxylic acid synthase; ACS; EFE; banana; ethylene forming enzyme; ethylene biosynthesis; plant; fruit ripening; transgenic; enzyme; inhibition; flavour; texture; tomato.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               present sequence represents a B. thuringiensis CrylC crystal protein mutant peptide fragment.

processes involved in fruit ripening (and other ethylene related processes). Vectors comprising the CDNA sequences may be used to produce transgenic bananas with altered fruit ripening characteristics. The orientation of the pASCS and pACOSY used in the construct, will determine how the ripening process is affected. If the genes have a sense orientation, and transcribe mRNA that encodes an active enzyme, the rate of ripening will be increased (up-regulation) (however, full-length sense inhibition). If genes encode antisense mRNA, they will inhibit the expression of the genes involved in fruit ripening and hence slow the process down (down-regulation). In this manner different spatial and
                                                                                                                                                                                                     temporal patterns of genes expression can be produced. Retardation of the rate of ripening will reduce the rate of deterioration of banana fruit after harvest. This helps in production of high quality fruit that has improved flavour and texture. The present sequence represents a conserved peptide from tomato used for designing 3' degenerate primers for PCR amplification of ACS gene fragments from banana.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes isolated Bacillus thuringiensis CrylC delta-endotoxin polypeptides having: (i) at least one amino acid (aa) mutation in the loop region between alpha-helices 6 and 7 of domain 1; and (ii) better activity against Lepidoptera than the native CrylC. The polypeptides, possibly after activation in the digestive tract of

The method involves modifying the level of ethylene biosynthesis in a plant of the genus Musa by inserting into the genome of the plant a DNA sequence (I) encoding a banana 1-aminocyclopropane-1-carboxylic acid synthase (ACS) or an ethylene-forming enzyme (EFE), where (I) is in sense or antisense configuration, and modifies the level of activity of ACS or EFE. This reterack the rate of ripening in banana fruits which reduces the rate of deterioration of banana fruit after harvest. As a result, fruit may be harvested when they have reached partial or full ripeness and
insects, kills insect cells by formation of pores and disturbing cellular homeostasis. The polypeptides are used to control lepidopteran pests on plants, either: (1) applied as a composition; or (il) expressed in plants from heterologous nucleic acid (generating insect-resistant plants). They are more astive against Lepidoptera than native Crylc. AAAO08144 to AAA08182, and AAY82136 to AAY82432, represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Modifying level of ethylene biosynthesis in plant of genus Musa, involves inserting into genome of plant a DNA sequence encoding banana 1-aminocyclopropane-1-carboxylic acid synthase or ethylene-forming

still have the robustness to withstand handling and transport to reach the consumer in good condition. In this way high quality ripe fruit can be made available to the consumer with reduced requirement for postharvest treatment. High quality fruit will have improved flavour and texture. High quality fruit can be produced consistently over a wide harvest period, and such fruit can be held in store for long periods and ripened to optimal quality by the supply of exogenous ethylene.

                                                                                                                                                                                                                         q
```

The sequence represents the amino acid sequence encoded by PCR primers (AASO9917-AASO9924) used to clone ethylene-forming enzyme (EFE) from banana, used in the method of the invention. The method involves modifying the level of ethylene blosynthesis in a plant of the genus Mbsa by inserting into the genome of the plant a DNA sequence (I) encoding a banana 1-aminocyclopropane-1-carboxylic acid synthase (ACS) or an ethylene-forming enzyme (EFE), where (I) is in sense or antisense

```
ö
configuration, and modifies the level of activity of ACS or EFE. This retards the rate of ripening in banana fruits which reduces the rate of deterioration of banana fruit after harvest. As a result, fruit may be harvested when they have reached partial or full ripeness and still have the robustness to withstand handling and transport to reach the consumer in good condition. In this way high quality ripe fruit can be made available to the consumer with reduced requirement for post-harvest treatment. High quality fruit will have improved flavour and texture. High quality fruit can be produced consistently over a wide harvest period, and such fruit can be held in store for long periods and ripened to optimal quality by the supply of exogenous ethylene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Haugen T;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to human Calpha-s proteins and cDNA molecules encoding them. Calpha-s is a new splice variant of Calpha catalytic subunit of CAMP dependent protein kinases. Human Calpha-s CDNA is useful for the preparation of an antisense drug. Calpha-s protein is useful for the preparation of a pharmaceutical, and a medicament for manipulating the motility in sperm, for use as contraceptive, and for treating male infertility. A kit comprising antibodies

**HWARLYST*** MEAT*** I, where R1 = phosphotyrosine (pryr) or a
phosphotyrosine analogue having a hydrolysis resistant phosphorous
molety, and R3 = any amino acid. AAM/R501 to AAW/R523 represent
specifically claimed examples of the peptides described. The peptides useful for modulating both cellular growth to control unwanted cell
proliferation in e.g. selected malignancies and for metabolic control in
e.g. diabetes, by inhibiting signal transduction molecules such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A method has been developed of inhibiting a site-specific interaction between a first molecule having an SH2 domain and a second molecule that interacts with the SH2 domain. The method comprises contacting the first
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             protein tyrosine kinases (PTKs) which include growth factor receptors, prote-oncogene and oncogene products and the insulin receptor. The peptides are also useful for treating and for studying the enzymatic mechanisms of PTPase activity and the metabolic and biochemical roles of
                                                                                                                                                                                                                                                                                                                                                                                                                                              SH2 domain; binding; inhibition; interaction; site specific; signal transduction; protein tyrosine kinase; phosphotyrosine; growth factor receptor; oncogene; cellular growth; cell proliferation; metabolic control; diabetes; PTK; proto-oncogene; insulin receptor.
                                                                                                                                            Gaps
against Calpha-s protein is useful for diagnosing non-motile sperm. The present sequence is ovine Calpha-s peptide.
                                                                                                                                              .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AMM95057 or a substitution variant, addition variant angivents shown in AMM95057 or a substitution variant, addition variant or other chemical derivative of that peptide. The peptide or its variant or a derivative can be capped or uncapped. The peptides are useful for in vivo or in vitro prognostic and diagnostic applications, e.g. as labelled peptides to detect a binding site for the peptide on a surface or in the interior of a cell (see AMM95057 for detailed uses of the peptide compound, its variants/derivatives). The present sequence represents a urokinase peptide derivative tested for inhibition of angiogenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an anti-invasive and anti-angiogenic peptide
                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

AAR99602-R99603 are heptad repeat sequences found in the C-terminal of the large subunit of mammalian RNA polymerase II. The peptides all correspond to a consensus heptad repeat sequence (see AAR99601) found not only in mammals but in other ewaryote species e.g. Drosophila. Arabidopsis, C. elegans, S. cerevisiae and plasmodium spp. The heptad repeats are used for the delivery of compounds to the nucleus of a cell. In vivo the C-terminal heptad repeats are phosphorylated and accumulate in discreet subnuclear compartments where pre-mRNA molecules are
                                                                                                                                                                                                                                                                                                                                                        synthesized and spliced. The peptides may be attached to antisense oligonoucleotides, catalytic RNAs, transgenes, drugs or imaging agents. Peptides used for the delivery of agents to the RNA splicing domains within the nucleus are pref. made up of multiple consensus or variable
                                                                                                                                                     Carboxy-terminal RNA polymerase II peptide(s) - used to deliver bioactive agents into discrete compartments in the nucleus of cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RNA polymerase II carboxy-terminus; Pol II CTD; peptide conjugate; bioactive molecule; phosphorylation; serine/arginine motif.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /note= "Ser in consensus motif is replaced by Thr'
